

Week	Topic	Lab Experiment Title
Week-1	Introduction to Linux & Ubuntu Environment	Experiment 1: Familiarization with the Linux (Ubuntu) Environment and Basic Terminal Operations
Week-2	File and Directory Management Commands	Experiment 2: Performing File and Directory Management Using Linux Commands
Week-3	File Viewing, Editing & Permissions, Shell Scripting Basics	Experiment 3: File Manipulation, Permission Management, and Basic Shell Scripting in Linux
Week-4	Lab Assessment	Lab Assessment-I: Linux Fundamentals, File Management, and Shell Scripting
Week-5	Process Management & System Monitoring	Experiment 4: Managing Linux Processes and Monitoring System Performance
Week-6	Process Management & System Monitoring	Experiment 5: Advanced Process Management and System Resource Monitoring in Linux
Week-7	Mid Lab Test	Mid Laboratory Examination
Week-8	CPU Scheduling Algorithms	Experiment 6: Simulation and Performance Analysis of Non-Preemptive CPU Scheduling Algorithms
Week-9	Preemptive and Non-Preemptive CPU Scheduling Algorithms	Experiment 7: Comparative Analysis of Preemptive and Non-Preemptive CPU Scheduling Algorithms
Week-10	Memory Management Techniques	Experiment 8: Simulation of Contiguous Memory Allocation Techniques (First Fit, Best Fit, and Worst Fit)
Week-11	Memory Management Techniques	Experiment 9: Memory Management Using Paging and Segmentation Techniques <i>(or Dynamic Memory Allocation Techniques, depending on your syllabus)</i>

Week-12	Page Replacement Algorithms	Experiment 10: Implementation and Performance Evaluation of Page Replacement Algorithms
Week-13	Performance Evaluation & Lab Final
